Interview Preparation Plan

Focused React + Node + Production Preparation

Priority	Topic	Resource	What to Study
1	JS/React Programming	Shruti Kapoor – JS Coding Interview https://www.youtube.com/watch?v=SLWNw5Btqyw	Debounce, throttle, arrays/objects, flatten, grouping, memoization
2	Node Memory	Node.js Memory Leak Debugging https://www.youtube.com/watch?v=hliOMEQRqf8	Heap, GC, memory leak, heap snapshot
3	Node CPU/Production	Node Production Debugging https://letsbuildsolutions.com/blog/devops/production-debugging-in-node-js-cpu-profiling-memory-leak-detection-and-flame-graph-analysis/	CPU 100%, profiling, event-loop delay, slow API
4	Redis	Redis Course https://www.youtube.com/watch?v=hFNnNVawHhk	Only: caching, TTL, rate limiting
5	Security/JWT	Refresh Token Rotation https://www.classcentral.com/course/youtube-refresh-token-rotation-and-reuse-detection-in-node-js-jwt-authentication-132715	Access/refresh token, rotation, reuse detection, revocation
6	XSS/CSRF	OWASP XSS https://cheatsheetseries.owasp.org/cheatsheets/Cross_Site_Scripting_Prevention_Cheat_Sheet.html	XSS, sanitization, HttpOnly, CSP

7	SQL	MySQL/SQL practice	1NF/2NF/3NF, JOIN, Index, transactions
8	System Design	Practice with ChatGPT	Load balancer, horizontal scaling, Redis, DB, traffic spike

Do NOT study right now

- Python
- Flask
- Kubernetes
- Deep AWS
- Deep MongoDB
- Advanced microservices

Immediate focus

React coding → Node production → Redis → Security → Basic system design

8. System Design — Recommended Resource

Watch: AWS Developers — System Design for Beginners (Full Guide)
https://www.youtube.com/watch?v=BAVrwcPDa-k
Focus: requirements → traffic estimation → high-level architecture → APIs → technology selection → implementation constraints.

After this, use ByteByteGo for short visual explanations of scaling, caching, load balancing and other core system-design concepts.

ByteByteGo — System Design Interview: A Framework for Beginners and Seniors
https://www.youtube.com/watch?v=bUHFg8CZFws

System Design Topics for Your Interviews

- Horizontal vs vertical scaling
- Load balancer
- Caching / Redis
- Database scaling and indexing
- Rate limiting
- High availability
- File upload / object storage
- Monolith vs microservices
- Traffic spike / autoscaling
- Failure handling
